Learning in the 21st Century Classroom

It is important for institutions to provide learners with a learning environment that integrates seamlessly into their lifestyle and develops skills relevant for the workplace. Odigia's learning engagement platform has been designed to develop 21st century skills and keep students engaged.
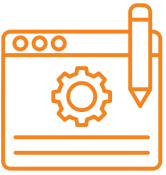

Interactivity within the platform: Learners develop collaboration skills within a familiar social environment, by communicating with peers through discussion tools integrated with the course materials. These discussions will create a deeper engagement with the materials to encourage the development of higher-level thinking skills.

Solid base in learning theory: By adopting principles of inquiry-based learning, Odigia engages every learning style and promotes the development of problem-solving and critical thinking skills. The use of game theory to track learner progress and inform peer-to-peer reviews transforms learning into a rich and engaging experience.
